A sample of a noise random signal X in an electric circuit for a period of 20 seconds can be modelled using all these matlab instructions:

```
t=0:0.01:20;
rng(1234);
X=1.5+cos(3*t)-0.25*sin(0.5*t)+0.2*rand(1,length(t));
```

Answer the following questions :

(a) (3 points) The minimum value of the signal on the closed time interval [10.5, 11.5] is

- ☒ 6.3308e-01✔
- ☐ Leave it empty (no penalty)
- ☐ 6.3064e-01
- ☐ 6.3759e-01
- ☐ 6.3779e-01

Puntuació 3,00 sobre 3,00

La resposta correcta és: 6.3308e-01

Hint1: The maximum value of the signal X on the whole interval [0, 20] is 2.9101e+00

(b) (3 points) Now we want to approximate the values of the signal X using a spline curve, s_{25} , build taking the values of X only every 25 time ticks (that is: $X(1), X(26), X(51), \dots$). The the value of this spline on the time $t = 10.33$, that is, the value of $s_{25}(10.33)$ is :

- ☐ 2.7982e+00
- ☐ 2.8150e+00
- ☒ 2.8026e+00✔
- ☐ 2.8172e+00
- ☐ Leave it empty (no penalty)

Puntuació 3,00 sobre 3,00

La resposta correcta és: 2.8026e+00

Hint2: The maximum value of the spline s_{25} over all the time ticks is 2.9082e+00

(c) (4 points) The maximal absolute difference between the signal and the spline over all the time ticks is:

- ☐ Leave it empty (no penalty)
- ☒ 2.0569e-01✔
- ☐ 2.0678e-01
- ☐ 2.0582e-01
- ☐ 2.0662e-01

Puntuació 4,00 sobre 4,00

La resposta correcta és: 2.0569e-01

Hint3: The absolute difference between the signal and the spline at the time tick 255 is 3.8115e-02
